

A PROPOSAL FOR ATMTA · STAR ATLAS

STAR ATLAS SOURCER

A community-sourced asset pipeline — bounties in, vetted on-spec art out.

Presented by the **AEP · Aephia** guild

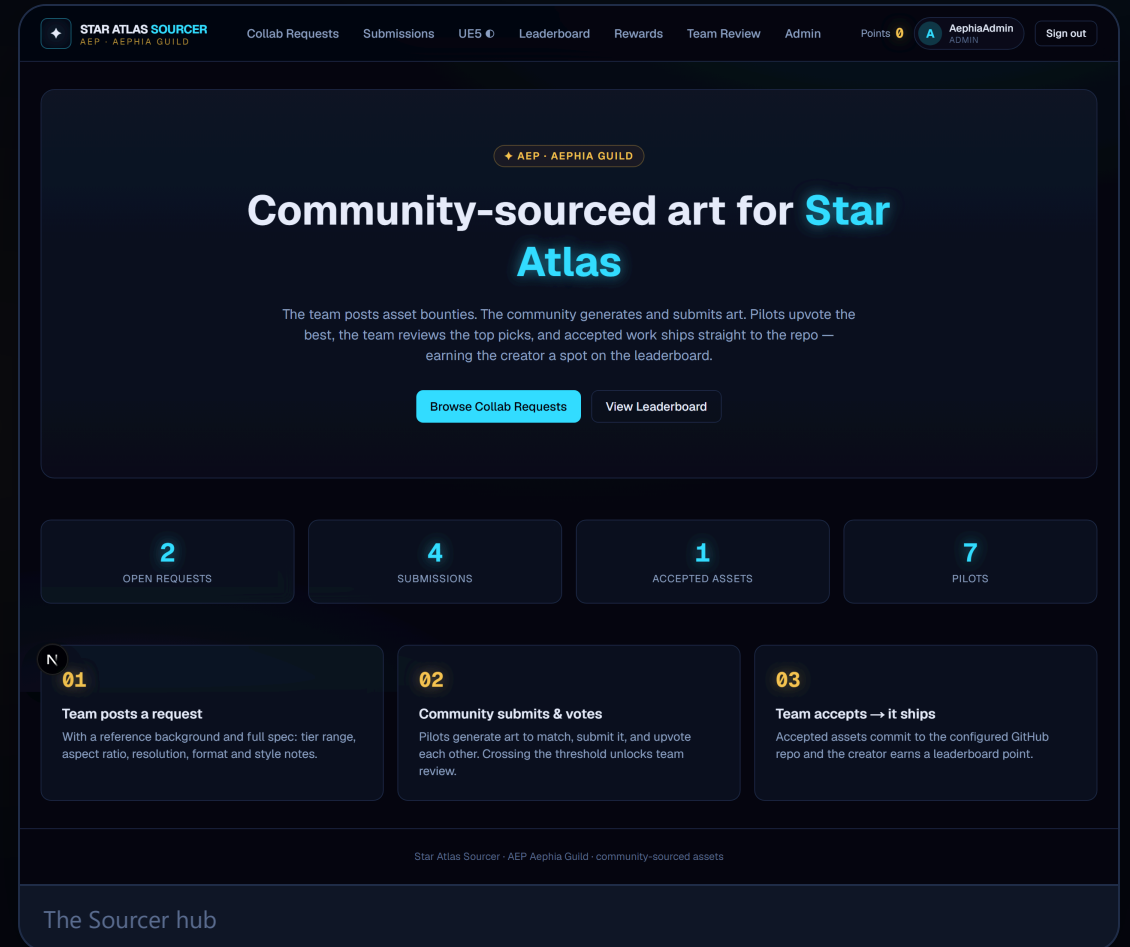

The opportunity

- ▶ Star Atlas is a universe of **thousands** of assets — an ever-growing content demand.
- ▶ The community is full of **talented, eager creators** already making fan art.
- ▶ But there's **no structured way** to source, vet, and ship community art at scale.
- ▶ Sourcer turns that energy into a **curated content pipeline** you control.

One clean pipeline

Request → Submit → Vote → Review → Ship

- ▶ Your team posts bounties with **exact specs**.
- ▶ The community submits and **upvotes** the best.
- ▶ You review only the **community-vetted shortlist**.
- ▶ Accepted art ships **straight to your repo**.

How it works

01 Team posts a bounty

Title, asset type, tier range, aspect ratio, resolution, format, multi-image sets + a reference background.

02 Community submits

Creators generate art to spec and submit (exactly the number of images requested).

03 Pilots upvote

Crossing an admin-set threshold promotes a submission to review — the rest never reach you.

04 Team reviews

Accept or reject the curated shortlist in one place.

05 Ship + reward

Accepted art auto-commits to your GitHub repo; the creator earns points.

Built for the **ATMTA** team

- ▶ **Precise requests:** tier range, aspect ratio, resolution, format, multi-image sets, reference background, output filename.
- ▶ You only ever review **community-vetted** work — no noise.
- ▶ **One-click accept** → **GitHub commit** with consistent, per-tier naming.
- ▶ Set the **points reward per request** — pay more for harder / UE5 work.

NEW COLLAB REQUEST

Post a bounty for the community to fulfill.

QUICK FILL

Skip the repetitive clicks

BOUNTY DETAILS

TITLE *

e.g. Warp Drive — Tiers 1-5

DESCRIPTION

What you need and any context for creators.

OUTPUT IMAGE FILE NAME

warp-drive-tier3

The accepted asset is committed to GitHub under this name. The file extension is added automatically — leave blank for an auto-generated name.

ASSET TYPE

Warp Drive

PLATFORM

☒ Web ☐ UE5 coming soon

Pick at least one. UE5 asset support is rolling out later.

TIER MIN

1

TIER MAX

5

IMAGES REQUIRED

1

Max 5. Submitters must upload exactly this many.

REWARD POINTS (ON ACCEPT)

1

Points the author earns if accepted. Set higher for harder / UE5 work.

IMAGE REQUIREMENTS

ASPECT RATIO

1:1

RESOLUTION

1024x1024

FORMAT

PNG

MAX FILE SIZE (MB)

10

COLOR PALETTE

Deep space blues, AEP gold accents

STYLE NOTES

Clean sci-fi industrial, subtle glow

REFERENCE BACKGROUND

Optional. Upload the background you want creators to build on top of.

The review queue — only the shortlist

Quality control, by design

- ▶ An **upvote threshold** (you configure it) filters before your team sees anything.
- ▶ Only the **best submissions** reach review.
- ▶ **Multi-image sets** handled natively (e.g. Warp Drive Tier 1–5 = 5 images).
- ▶ Every accept commits with a **predictable filename** you define.

Motivated community

- ▶ Public **leaderboard** — recognition drives participation.
- ▶ **Points per accepted asset**, configurable by difficulty.
- ▶ **Rewards store**: creators redeem points for prizes (e.g. ships), paid out by you.
- ▶ Solana wallet capture for **manual payouts** — you stay in control.

Rewards store (mock ships)

Ready to scale

- ▶ **Agent API + MCP:** post requests programmatically or via AI agents.
- ▶ **Platform tagging** — Web now, **UE5-ready** (roadmap) for 3D assets.
- ▶ **Draft / publish** workflow so agent-created requests can be human-approved.
- ▶ Role-based access: Member · Team · Admin.

IP & control stay with **you**

- ▶ Every submission requires agreement to a **usage license granting ATMTA full rights** — with no obligation to the creator (acceptance recorded per submission).
- ▶ Accepted assets land in **your repo, your branch, your naming convention**.
- ▶ You control everything: thresholds, acceptance, reward payouts, roles, and the GitHub target.
- ▶ *Disclaimer text is placeholder — to be finalized by ATMTA counsel.*

Working today

- ▶ A real, running **MVP** — not a mockup.
- ▶ Built on **Next.js + Prisma**; Discord login; GitHub commit integration.
- ▶ Live: requests, submissions, voting, review, leaderboard, rewards, agent API.
- ▶ Open roadmap: UE5 assets, image-spec validation, notifications.

Set GITHUB_TOKEN in .env (a PAT with repo contents:write) to enable commit-on-accept.

LET'S PILOT IT

A steady stream of **vetted, on-brand** community art.

WHAT WE NEED

A sample set of asset requests & a target GitHub repo.

WHAT YOU GET

Curated, on-spec art — filtered by the community before it reaches you.

NEXT STEP

A short pilot with the Aephia guild and your feedback.
